
TF Clusters vs GO Parent Families (JASPAR, 19 families)
Dot size = % of cluster targets in GO family; Color = enrichment (avg NES)
TF Family
SOX−related factors
SMAD factors
Nuclear factor 1
Jun−related
Thyroid hormone receptor−related factors (NR1)
Steroid hormone receptors (NR3)
Interferon−regulatory factors
STAT factors
MyoD/ASC−related factors
bHLH−ZIP
NFAT−related factors
E2F
TBP−related factors
Runt−related factors
C4−GATA−related
Ets−related
NF−kappaB−related factors
More than 3 adjacent zinc fingers
CEBP−related
cell junction disassembly
respiratory burst
phagocytosis, engulfment
regulation of lipid metabolic process
reactive oxygen species metabolic process
cell killing
regulation of proteolysis
actin cytoskeleton organization
catabolic process
leukocyte cell−cell adhesion
apoptotic process
cell population proliferation
phagocytosis
leukocyte differentiation
immune system process
cell activation
response to external stimulus
positive regulation of biological process
cellular process
